Welcome to HTML learn it from scratch course

Hi there and welcome to HTML learn it from scratch course! In this course in only 8 hours of video lessons we will go through all that you need to learn about HTML to get enough knowledge to create HTML websites from scratch.

Every website on the internet is completely or on some way created with HTML, so learning of HTML is starting point if you want to do web development, web design etc.

For this course you don't need to have any previous knowledge about HTML or any other web technology, you don't need to have any previous knowledge about any special software, only that you need to have for this course is some basic knowledge how to use any text editor (Notepad, Notepad++, Sublime, Visual Studio Code or any other). We will use Notepad++, simple, easy to use and free text editor that you can download from this link: https://notepad-plus-plus.org/downloads/ .

Every single lesson in the course contains four parts:

1st part contains introduction what we will learn in that lesson

2nd part will cover little bit about theory related with that topic

3rd part is coding time where we will implement in code all that we have learned

4th part is lesson summary where we will recap all that we have learned in that lesson

Please use advantage of this course that has video lessons so if anything is unclear watch that lesson again, pause lesson if you think that we are going too fast and always check additional materials that we have for every lesson. For any additional questions you can send message in Contacting the Instructor section.

Thank You for choosing us! ♡

Course Content

Learning of HTML is super easy and super fun so have a great time and enjoy in our course!
